# SYLLABUS OF A MODULE

Polish name of a module	Analiza sygnałów i przetwarzanie danych	
English name of a module	Signal analysis and data processing	
ISCED classification - Code	0710	
ISCED classification - Field of study	Engineering and engineering trades	
Languages of instruction	English	
Level of qualification:	1 – BSc (EQF 6)	
Number of ECTS credit points	4	
Examination:	A - assignment	
Available in semester:	A – autumn only	

### Number of hours per semester:

Lecture	Tutorials	Laboratory	Seminar	E-learning	Project
15	0	30	0	0	0

## **MODULE DESCRIPTION**

### **MODULE OBJECTIVES**

- O1. To make students familiar with statistical methods and numerical tools used in signal analysis.
- O2. To provide the general knowledge of measuring techniques applied for diagnostics of dynamic processes

### PRELIMINARY REQUIREMENTS FOR KNOWLEDGE, SKILLS AND OTHER COMPETENCES

- 1. Fundamentals of mathematics, physics and fluid mechanics, statistics and error estimation.
- 2. Ability to work individually and collaborate in a group.
- 3. Data analysis and presentation of results.

### LEARNING OUTCOMES

- LO 1 Knowledge of statistical methods in analysis of dynamic processes
- LO 2 Ability to use software tools for signal analysis

Type of classes – lecture	Number of hours
<b>Lec 1</b> - Introduction to metrology of dynamic processes, basic definitions. Dynamic process as a stochastic process. Time history (signal) as a realisation of stochastic process. Stationary and ergodic processes.	1
<b>Lec 2-3</b> - Signal classification. Statistical moments, stationarity tests. Averaging rules, estimation and estimator. Probability density function.	2
<b>Lec 4-5</b> - Correlation analysis, auto- and cross-correlation functions. Properties of correlation functions and their relations with signals' statistical measures	
Lec 6-7 - Fourier series, spectrum. Fourier integral. Power spectral density.	2
<b>Lec 8-9</b> - Analogue to digital conversion, sampling, Shannon theorem, sampling ambiguity, Nyquist condition. Digitization. Pre-processing and post-processing.	2
Lec 10-11 - Discrete (DFT) and fast (FFT) Fourier transforms.	2
Lec 12-13 - Aliasing. Spectral leakage, smoothing (window) functions.	2
<b>Lec 14-15</b> - Wavelet analysis. Basic definitions. Properties and limitations. Application to analysis of non-stationary and unsteady signals. Diagnostic value of wavelet analysis.	2
Sum	15
Type of classes– laboratory	Number of
	hours
Lab 1-2 - Analogue to digital processing.	nours
	2
Lab 3-4 - Statistical moments. Stationarity tests.	
	2
Lab 3-4 - Statistical moments. Stationarity tests.	2 2
Lab 3-4 - Statistical moments. Stationarity tests. Lab 5-6 - Probability density function, its relations to statistical measures of the signal.	2 2 2
Lab 3-4 - Statistical moments. Stationarity tests.Lab 5-6 - Probability density function, its relations to statistical measures of the signal.Lab 7-8 - Autocorrelation function.	2 2 2 2
Lab 3-4 - Statistical moments. Stationarity tests.Lab 5-6 - Probability density function, its relations to statistical measures of the signal.Lab 7-8 - Autocorrelation function.Lab 9-10 - Cross-correlation function.Lab 11-12 - Application of DFT (Discrete Fourier Transform) to frequency analysis of	2 2 2 2 2 2
Lab 3-4 - Statistical moments. # **TEACHING TOOLS**

1. Lecture with the use of multimedia presentations and online tools		
2. Computer laboratory		
3. Licenced software tools		
4. Instructions to laboratory exercises		

# WAYS OF ASSESSMENT (F – FORMATIVE, S – SUMMATIVE)

**F1** - assessment of preparation for laboratory exercises

F2 - assessment of the ability to apply the acquired knowledge while doing the exercises

F3 - evaluation of reports on the implementation of exercises covered by the curriculum

**F4** - assessment of activity during classes

**S1** - assessment of the ability to solve the problems posed and the manner of presentation obtained results - pass mark \*

S2 - assessment of mastery of the teaching material being the subject of the lecture - exam

\*) in order to receive a credit for the module, the student is obliged to attain a passing grade in all laboratory classes as well as in achievement tests.

# STUDENT'S WORKLOAD

L.p.	Forms of activity	Average number of hours required for realization of activity			
1	1. Contact hours with teacher				
1.1	Lectures	15			
1.2	Tutorials	0			
1.3	Laboratory	30			
1.4	Seminar	0			
1.5	Project	0			
1.6	Examination	0			
	Total number of contact hours with teacher:	45			
2. Student's individual work					
2.1	Preparation for tutorials and tests	15			
2.2	Preparation for laboratory exercises, writing reports on laboratories	30			
2.3	Preparation of project	0			
2.4	Preparation for final lecture assessment	5			
2.5	Preparation for examination	0			
2.6	Individual study of literature	5			
	Total number of hours of student's individual work:	55			
Overall student's workload:		100			
Overall number of ECTS credits for the module		4 ECTS			
Number of ECTS points that student receives in classes requiring teacher's supervision:		1.8 ECTS			
Number of <b>ECTS</b> credits acquired during practical classes including laboratory exercises and projects:		2.4 ECTS			

### BASIC AND SUPPLEMENTARY RESOURCE MATERIALS

- 1. Newland D.: An Introduction to Random Vibrations, Spectral & Wavelet Analysis, Dover Publications, 2005
- 2. Hlawatsch F., Auger F.: Time-Frequency analysis. John Wiley & Sons, 2013
- 3. Cariolaro G.: Unified Signal Theory, Springer, 2011
- 4. Shiavi R.: Introduction to Applied Statistical Signal Analysis. Elsevier, 2007
- 5. Agilent Technologies: The Fundamentals of Signal Analysis, Application Note 243, 2000

### MODULE COORDINATOR (NAME, SURNAME, E-MAIL ADDRESS)

dr inż. Dariusz Asendrych (darek@imc.pcz.pl)
