Learning outcomes

Economic theory, policy and history are examined with major emphasis placed on macroeconomics and microeconomics.

Macro- examines topics such as aggregate demand and supply, national Income, investment expenditures, government taxes and expenditures, with a view toward providing a consistent model of income determination. Among the topics examined with this model are fiscal versus monetary policy, balance of payment deficits, growth of an economy through time, inflation, and unemployment.

Micro- course is the study of economic theory and applications at the "micro" level. Topics include the development of demand theory, the determination of optimum output levels for the individual firm and industry, and determination of rewards for inputs to production. The propositions of welfare economics are considered, and general equilibrium analysis provides an overview of the system as a whole.

The whole course is intended to introduce students to economics and to emphasize current issues in economic and social policy. The course material illustrates how the economist's perspective aids in understanding these issues. The course objective is to enhance the student's economic literacy. Upon completion, the student will be able to critically evaluate economic arguments appearing in the daily media and understand the conditions of business environment.

Prerequisites General knowledge on the functioning and the basic processes taking place in the society and economy, Micro- and Macroeconomics I

Course description

LECTURE

Microeconomics

- Chapter 1. Product Markets: The Competitive Ideal
- Chapter 2. Modern Microeconomic Issues: Market Failure and Public Finance
