

<i>Course name</i>	Sludge and Waste Management	<i>Code</i>	<i>Credit points</i>	3
--------------------	-----------------------------	-------------	----------------------	----------

Language of instruction English

Intelligent Energy (IE), Biotechnology for Environmental Protection (BI),

Type of studies BSc

*Unit running the
programme* Faculty of Environmental Protection and Engineering
Institute of Environmental Engineering

*Course coordinator and
academic teachers* Prof. Lidia Wolny
Krystyna Malińska, PhD.
January Bień, PhD.

Semester	Lec.	Tut.	Lab.	Proj.	Sem.	Credit points
V	30		30			3

Learning outcomes Understanding the waste management principles; processes for waste and sludge management and utilization; methods and technologies applied for waste and sludge management.

Prerequisites Technology of water and sewage treatment

Course description

LECTURES:

LECTURES:
Legislation aspects of waste management in Poland and EU. Waste - classification and generation places. Municipal waste – management methods. Industrial waste – characteristics, utilization methods. Sewage and water sludge – conditioning, dewatering, hygienization, ultimate disposal of sludge (composting, drying, combustion and landfilling). Hazardous waste – risk evaluation, methods of management and disposal.

LABORATORY:

Determination of waste characteristics (moisture content, organic matter content, bulk density, biodegradability, particle size). Determination of sludge dry matter and hydration, capillary suction time. Selection of proper polyelectrolyte dose for sludge conditioning. Investigation of filtration and centrifugation processes. Measurement of sludge viscosity and rheological properties.

Form of assessment Exam

Basic reference materials 1. Paul T. Williams, Waste Treatment and Disposal, 2nd edition, Wiley, 2005.

Other reference materials
