

<i>Course name</i>	Soil science and recultivation	<i>Code</i>	<i>Credit points</i>	<b>3</b>
--------------------	--------------------------------	-------------	----------------------	----------

*Language of instruction*      **English**

Intelligent Energy (IE), Biotechnology for Environmental Protection (BI)

### Type of studies BSc studies

*Unit running the  
programme* Faculty of Environmental Protection and Engineering  
Institute of Environmental Engineering

*Course coordinator and academic teachers*

<i>Form of classes and number of hours</i>	Semester	Lec.	Tut.	Lab.	Proj.	Sem.	Credit points
	V	2	-	2	-	-	3

**Learning outcomes** Understanding the processes and phenomena taking place in the soil environment, and in degraded areas.

*Prerequisites* The basic knowledge of mathematics, physics, biology, chemistry, hydrology, hydrogeology and earth sciences, transport and fate of contaminants in the environment.

### *Course description*

## LECTURES:

**LECTURES:**  
Issue of population growth limit and soil resources limits. Types of landscape and instruments of its cultivation. Environmental management and soil protection. Soil formation, processes and soil-forming factors. Soil morphology, genetical levels. Soil as a 3-phase setup. Chemical and physical soil features. Organic matter in soil. Biological soil features. Soil abundance and fertility. Soil as an element of environment. Soil functions. Processes, conditions and effects of soil demotion. Forms of anthropopressure, soil pollution and intoxication. Soil erosion. Concept of reclamation. Reclamation as a part of balanced development realization. Prerequisites and postulates of reclamation. Programming soil protection and improvement. Reclamation principles, directions, phrases and methods. Vegetation as a part of reclamation processes. Evaluation of reclamation.

## **TUTORIALS:**

## **LABORATORY:**

**LABORATORY:** Estimation of physical and chemical soil properties. Estimation of organic matter

and biological soil properties. Soil monitoring. Selected methods of reclamation. Evaluation of remediation progress. The transport and fate of contaminants in the environment.

**PROJECT:  
SEMINAR:**

*Form of assessment* credit
